CUSTOMER RETENTION & STRATEGIC RECOMMENDATIONS

- **Customer Retention Status**

- **Overall Retention:** Strong at roughly **80%** (2,037 churned out of 10,000 total customers), but the high average salary of churned customers (\$100k) represents a significant loss in lifetime value.
- **Product Stickiness:** Retention is heavily tied to product count. Customers with only 1 product have a drastically higher churn rate, while those with 3-4 products have very low churn.
- **Demographics:** The 35-50 age group across all regions (especially Germany) leaves most frequently.

- **Strategic Recommendations**

- **Cross-Sell Products:** Aggressively target single-product customers with offers to open a 2nd or 3rd product (e.g., bundle a credit card with a savings account). This is your biggest lever for retention.
- **Target the 35-50 Age Gap:** Develop tailored loyalty perks or personalized financial planning services specifically for middle-aged customers in Germany and France to stop the exit trend.
- **Early Warning System:** Flag customers with "Fair" or "Poor" credit scores for proactive outreach. Provide them with credit-building tools or financial counseling before they decide to leave.
